## **Application – Gate Intercom** **Tech Works Solution - Voice-Call**

### **General Description -**

When a large property required remote intercom at multiple entrances with a central security station, Tech Works answered the call. With each entrance being as far as 2 miles from the central station a fiber interface was proposed to handle the intercom and gate control. Standard intercom components were used with fiber transceivers to deliver clear communications to each entrance. When a guest arrives at one of the gates and presses the intercom button, the call is answered at the main security station on the property. The security guard has a telephone and a video monitor so that he can evaluate every person and their vehicle at the gate. Once he has verified who the person is and where they are going he can open the gate using a DTMF code on the 2590TC Telephone Control Console.

### **Basic system components:**

<b>Product</b>	<b>Purpose or Function</b>
	<b>User Interface Devices:</b>
2590-TC	Telephone Console with Caller ID
2021	Correctional Grade Speaker Station w/ call button
	<b>System Control Devices:</b>
2528	High Power Intercom Amplifier supports up to eight 25-volt industry standard speakers
PS1260	Power Supply
	<b>System Interface Devices:</b>
2590	Telephone interface module supports any consumer grade corded or cordless telephone w/ CID

### **Benefits of using Tech Works –**

- Distributed processing allows for easy installation and configuration of each calling station.
- Intuitive telephone operation provides clear two-way communication and requires little or no training for staff members.
- Redundant circuitry allows for call processing even in the event of audio failure.
- Direct interface with PBX (if desired) for call routing.
- Free Topology Wiring allows flexible cabling schemes.
